

PARTNERSHIP & SPONSORSHIP PROSPECTUS

PAN-INDIA / 2026

THE NEXT GENERATION WILL NOT BE HANDED TO US.

So we're building somewhere for them to begin.

bitsTM *&bytes*

AN INDEPENDENT, TEEN-LED BUILDER NETWORK ACROSS INDIA, UNDER GOBITSNBYTES FOUNDATION

© 2026 GOBITSNBYTES FOUNDATION

A LETTER FROM THE FOUNDERS

*The gap we care about is short and stubborn:
the distance between a teenager with an idea
and a thing that actually exists.*

In July 2025 we were organising a regional student hackathon under an external partner. By mid-August the partner had cancelled it. The easy move was to wait for someone else to hand us a new date. We were teenagers with a problem, and we still had a group of people who wanted to build.

So we started bits&bytes™ in November 2025, at first to make one independent hackathon happen. Then the shape of the work got clearer. Young people have plenty of reasons to consume technology. What they lack is a place to use it, break it and ship it, next to other people doing the same.

The network is still young, and that's part of the point. We're building the systems, standards and partnerships that let a teen-led organisation move fast without asking young people to carry adult legal or financial risk.

OUR WORKING BELIEF

**School can teach the map. Real projects teach you
where the ground gives way.**

Yash Singh / Aadrika Maurya / Akshat Kushwaha

CO-FOUNDERS, bits&bytes™

THE SHAPE OF THE WORK

04

What is bits&bytes™

Who we are and what the network is for

05

Why this needs to exist

The gap between school and capability

07

How we work

Our mission, the method and the model we run

08

The record so far

From a cancelled event to a pan-India network

09

Programmes and forks

The ways in, and local chapters that run their own rooms

11

Events and the next room

India Innovates 2026, what we've run and the Regional Hackathon Series

13

Collaborations

Community partnerships and the names beside us

14

Trust is part of the product

Legal structure, safeguarding and stewardship

15

Why partner

University, corporate and institutional pathways

18

The next three years

Forks, schools, the maker track and alumni

19

Next steps

One conversation, then one thing built

This is a working prospectus. We'd rather shape a partnership together, with the teenagers who'll live inside it and the adults who'll help keep it safe.

WHAT IS bits&bytes™

A teen-led, builder-first network for technology education, run for teenagers across India who want to move from interest to evidence.

**WE CREATE THE MISSING
CONDITIONS TO BUILD.**

bits&bytes™ is the infrastructure around the work: the people, programmes, tools, spaces and standards that help a young person finish something real, plus the public moment where they show it. A group chat or an events calendar can't do that on its own.

01

BUILDER NETWORK

Teenagers, mentors, organisers, designers, engineers and alumni, working in public.

02

OPERATING LAYER

Events, cohorts, squads, forks and the systems that turn intent into a shipped artefact.

03

PUBLIC-BENEFIT FOUNDATION

A Section 8 structure that keeps money, IP, safeguarding and mission under stewardship.

The community is free to join. The bar isn't low. We ask people to show up, work with others and release something that holds up outside the room where it was made.

**SHIP
SOMETHING
USEFUL.**

GRADES ARE NOT PORTFOLIOS.

A syllabus can describe knowledge without building the muscle to use it.

THE GAP IS NOT MOTIVATION.

The gap is opportunity. A teenager can be curious, online and surrounded by information, and still have nowhere to practise building with other people. That's where capability stays theoretical.

86.8%

of 14–18-year-olds in ASER's rural sample were enrolled in education

5.6%

reported taking vocational training or related courses

43.3%

could solve a basic three-digit by one-digit division problem

Read these as a description of the system around young people: enrolment doesn't make someone ready, and access to content doesn't give them practice.

[1] ASER 2023: main findings. Rural 14–18 sample, 34,745 youth across 28 districts in 26 states.

THE WORLD IS CHANGING FASTER THAN THE TIMETABLE.

Useful education doesn't stop at explaining a concept. It gives a learner a reason to care, a constraint to work within, someone to work with and an audience that can tell whether the result holds up.

THE SKILL STACK IS MOVING FROM RECALL TO JUDGMENT.

The World Economic Forum's 2025 employer survey expects 39% of workers' core skills to change by 2030. AI and big data sit on that list next to analytical and creative thinking, resilience, collaboration and leadership. You build those through repeated contact with real constraints.

Policy already points this way. NEP 2020 asks for hands-on vocational exposure, internships and learning that crosses subject lines. Building is part of the stated direction.

A 2023 meta-analysis of 66 experimental and quasi-experimental studies found project-based learning had a positive effect on achievement, thinking skills and student attitudes. Practice is a learning method in its own right.

bits&bytes™ is the layer between what a teenager has been told and what they can show. That layer needs mentors, deadlines, peers, tools, feedback and a safe way to publish the result.

[2] WEF, Future of Jobs Report 2025 / [3] Government of India, NEP 2020

[4] Tao et al., Frontiers in Psychology, 2023, DOI: 10.3389/fpsyg.2023.1202728

BUILD THE MISSING LAYER.

Our mission is simple enough to remember and hard enough to keep us honest: to enable young builders, contributors, organisers, mentors and communities to learn, build, collaborate and contribute through locally adaptive technology, education, open-source, community and public-benefit initiatives.

01 FIND A REAL PROBLEM

Start with a person, place or system that needs something to work better.

02 MAKE THE FIRST VERSION

Teach only what the next decision needs, then let the work show the next gap.

03 WORK IN PUBLIC

Let peers, mentors and partners test the work while it can still change.

04 RELEASE THE RESULT

A project becomes evidence when someone outside the room can use it.

THE USUAL MODEL

Announce an event

Collect registrations

Run a room

Post the recap

Move on

THE bits&bytes™ MODEL

Spot the builder

Shape the problem

Staff the programme

Ship the product

Keep the relationship

The bet: a shipped artefact changes what a teenager believes is possible.

A NETWORK BORN FROM A CANCELLED EVENT

The timeline is short. The ambition behind it isn't.

DIFFERENT DOORS IN. ONE STANDARD OUT.

We build programmes around the stage a young person is actually at, without squeezing the network into one curriculum.

01

HACKATHONS

Problem-led sprints under real time pressure, where teams go from a blank repo to a public demo.

02

WORKSHOPS

Hands-on sessions that run inside our hackathons, on the tools people use now: AI, cloud, hardware, design and developer workflows.

03

COHORTS

Small groups with a shared pace, a clear output, peer accountability and mentors who've built the thing.

04

DESIGN AND DEV SQUADS

Cross-functional teams that keep shipping after the event and shape the work around real users.

05

HACKER HOUSES AND RESIDENCIES

Focused spaces for deep work and the kind of iteration that needs more than an evening.

06

OPEN-SOURCE AND PUBLIC GOODS

Projects, playbooks and tools that stay open when the programme ends.

07

HARDWARE AND MAKER TRACK

The next layer: fund, mentor and show deeptech prototypes in electronics and hardware.

The output always matters more than the format that got you there.

A FORK IS A LOCAL PLACE TO BEGIN.

On GitHub, a fork is your own copy of an upstream repo. You change it, run it your way, and it stays linked to the original so work flows back. A bits&bytes™ fork is the same thing for a city or school: a local chapter that takes the playbook and brand from upstream, runs its own room and ships back.

UPSTREAM: bits&bytes™

GOBITSNBYTES.ORG/FORK

START ONE AT GOBITSNBYTES.ORG/FORK

LOCAL AUTONOMY, UPSTREAM TRUST

Forks aren't franchises, subsidiaries or separate legal entities. A fork is permission to run locally, with a real operating system behind it. No fork can sign contracts, collect sponsorship money or bind GOBITSNBYTES FOUNDATION without written authority.

We want local ownership without asking teenagers to carry adult liability.

WHEN THE ROOM IS NATIONAL THE STANDARD HAS TO RISE.

India Innovates 2026 was a national civic-tech platform held at Bharat Mandapam, New Delhi. The funnel went from 1.26 crore+ applicants to 28,000+, then 5,000+, and finally 15 teams. bits&bytes™ was the Official Executive Partner. At that scale, coordination, participant experience and public trust mattered as much as the stage.

15

TEAMS AT THE FINAL STAGE

A young team can carry serious responsibility when the system around the work is serious too.

- 01 OPEN CIVIC PROBLEM
- 02 NATIONAL FUNNEL
- 03 FINALIST TEAMS
- 04 MINISTRY-LEVEL PRESENTATION STAGE

A partnership with bits&bytes™ can start in one city and still be designed with national ambition. We know what it takes to make a programme clear to participants, institutions and public stakeholders at the same time.

FROM THE FIRST BUILD TO THE NEXT ROOM

The events look different. The move underneath stays the same: give young people a real problem and enough structure to finish something.

UPCOMING

THE NEXT ROOM

REGIONAL HACKATHON SERIES

CITY QUALIFIERS ACROSS INDIA / FINALE AT IIT BOMBAY, DEC 17-18

We're launching a regional hackathon series for high schoolers across India. Win your city's qualifier and you're headed to the finale at IIT Bombay on Dec 17-18.

"So who's carrying your city?"

YOUNG LEADERSHIP NEEDS STRONGER GUARDRAILS

Our legal and safeguarding system is what lets a teen-led network take real responsibility for minors in the room and for other people's money.

GOBITSNBYTES FOUNDATION

SECTION 8 NON-PROFIT COMPANY / INCORPORATED 2 JUNE 2026

bits&bytes™ is the public network and brand. The Foundation is the upstream legal steward. The Board holds ultimate fiduciary, constitutional, financial, IP and safeguarding authority.

WRITTEN AUTHORITY

Titles describe operational responsibility. Contracts, sponsorships, funds and formal commitments move through written Board delegation.

SAFEGUARDING FIRST

Consent, supervision, reporting, moderation, confidentiality and escalation apply to every fork, event, cohort and digital space.

MONEY STAYS IN THE SYSTEM

Sponsorships, donations, event fees and grants flow through Foundation-approved financial channels. No personal UPI collections.

ONE FOUNDATION

Forks have local creative autonomy, but they aren't franchises, subsidiaries or separate legal entities. The brand stays stewarded.

We're youth-led, and that doesn't mean ungoverned. Teenagers get real operational ownership, and adult legal responsibility stays where it belongs.

PARTNER BEFORE THE SHORTLIST EXISTS.

The best time to meet a young builder is before they've settled into a job title. Partnering with bits&bytes™ puts you in the room while people are still trying things, picking what to care about and learning what good work feels like.

PURPOSE WITH PROOF

Fund work that ends in a public result you can point to, beyond a logo placement.

EARLY TALENT SIGNAL

Meet builders through the quality of their decisions, before you ever see a CV.

TECHNICAL RELEVANCE

Put real tools and real problem statements in front of the people who'll use them.

INSTITUTIONAL REACH

Work with a network that moves between schools, universities, cities and online spaces.

BRAND MEMORY

Be remembered as the organisation that made the work possible.

If you want a relationship with the builders of the next decade, start by helping one of them ship this month.

A PARTNERSHIP CAN BE SMALL, THEN COMPOUND

We'd rather design one sharp programme that works than sell a menu nobody can run.

UNIVERSITY PARTNERSHIP

- A campus fork or city chapter
- Co-designed pre-incubation for school builders
- Challenge labs, faculty mentors and maker-space access
- Showcases that show student work beyond a certificate

CORPORATE PARTNERSHIP

- Sponsor a problem track or a build sprint
- Developer tools, cloud credits, devices or expert mentors
- Technical review and responsible-AI guidance
- An early relationship with builders, before they reach the job market

SCHOOL AND INSTITUTION PARTNERSHIP

- Hackathons for Classes 8–12, with hands-on workshops built in
- Support for teachers and coordinators
- Safe, parent-aware event operations
- A repeatable path from interest to portfolio

We judge a partnership by the loop it keeps running after the launch post.

MAKE THE WORK VISIBLE WITHOUT MAKING IT SHALLOW

Every partnership should leave a useful trace for the young people in the programme and a clear record for the organisation paying for it.

01

NAMING

Co-branded programme identity, challenge tracks or an event series, where approved.

02

PRESENCE

Stage, venue, digital and community surfaces across WhatsApp, Instagram, Discord, LinkedIn and the web.

03

PARTICIPATION

Mentors, judges, reviewers, speakers and technical office hours.

04

PROOF

Public demos, project write-ups, impact notes and a clean post-programme report.

05

ACCESS

Early conversations with builders, fork leads, educators and future collaborators.

06

CONTINUITY

A path from one event to a cohort, a fork, a research track or the alumni network.

VISIBILITY IS THE BY-PRODUCT OF USEFUL WORK

A strong brand on a weak programme helps nobody. We want the brand next to work that a participant, a partner and a sceptical reader can all inspect.

THE NEXT THREE YEARS ARE A SYSTEMS PROBLEM.

We want a network that feels local when you walk in and national when you need it: more places to start, more people who can help and a reliable path from a first prototype to a longer body of work. The community can grow without lowering the builder-first bar.

FORKS

ESTABLISHED FORKS IN
MORE CITIES ACROSS
INDIA

SCHOOLS

PARTNER SCHOOLS AND
EDUCATIONAL
INSTITUTES

HARDWARE

A PLANNED TRACK FOR
HARDWARE, MAKER AND
DEEPTech WORK

ALWAYS

AN EVENT, COHORT,
SQUAD OR BUILD CYCLE
IN MOTION

ALUMNI ARE DISTRIBUTION FOR THE NEXT BUILDER.

An alumni layer lets people come back as mentors, reviewers, collaborators, funders, founders, researchers and hosts. It keeps the network from confusing age with authority: someone who has shipped more can make the first step less lonely for someone who hasn't.

THE ALUMNI NETWORK

Mentorship, peer review, research collaborations, founder sessions and a way back into the rooms where people first started.

THE ALUMNI FUND

A planned pool that recycles later success into first hardware parts, cloud credits, travel, prototypes and small grants for the next builders.

The long-term case for partnering is simple. You're helping build a system that sends value and capital back to the people who come after.

BRING US A PROBLEM WORTH GIVING TO TEENAGERS.

Start with something your organisation already knows is hard: a technology people aren't learning fast enough, a public problem that needs a new lens, students with more ability than evidence, or the hardware idea that keeps getting pushed back.

THE FIRST CONVERSATION

1. Tell us what you want to make possible.
2. Tell us what can't be compromised.
3. We'll sketch the smallest partnership that works.

SOMEWHERE IN INDIA A TEENAGER IS TRYING TO BECOME USEFUL.

What they need is ordinary: a room, a problem, a few people who'll stay and a reason to put the first version out into the world.

We're building that room.

A TEEN-LED BUILDER NETWORK FROM INDIA, FOR INDIA, WITH THE WORLD WATCHING
